

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

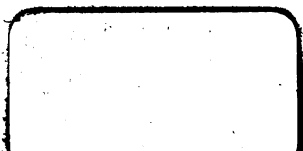

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at <http://books.google.com/>

THE
AMERICAN
PHONOGRAPHIC DICTIONARY:

EXHIBITING THE CORRECT AND ACTUAL SHORTHAND FORMS
FOR ALL THE USEFUL WORDS OF THE ENGLISH LAN-
GUAGE, ABOUT FIFTY THOUSAND IN NUMBER, AND
IN ADDITION, MANY FOREIGN TERMS;

ALSO,

THE BEST SHORTHAND FORMS FOR TWO THOUSAND GEOGRAPH-
ICAL NAMES, AND AS MANY FAMILY, PERSONAL,
AND NOTED FICTITIOUS NAMES.

BY

ELIAS LONGLEY,

Author of the "Eclectic Manual of Phonography," "The Reporter's
Guide," and other Works, and for Twenty-five Years a Ver-
batim Reporter and Teacher of Short-hand.

CINCINNATI:
ROBERT CLARKE & CO.

1882.

KE2485

Longley from Sec. Sch. Lib.

Entered according to Act of Congress, in the year 1882,

By ELIAS LONGLEY,

In the Office of the Librarian of Congress, at Washington, D. C.

PREFACE.

THE title of a book is generally supposed to indicate the nature of its contents. Hence when one opens a "Dictionary of the English Language" he naturally expects to find the words of that language printed in the established orthography. And so with a "German Dictionary," or a "French Dictionary," one expects to find the words in accordance with the title of the book. So, also, the purchaser of a "Phonographic Dictionary," or a "Dictionary of Phonography," reasonably expects that the words it contains will be represented phonographically; and if he finds not a phonographic character in its pages he is justified in considering its title as a deceptive misnomer.

Whatever the authors of other Phonographic Dictionaries, so called, may have had in their minds when they planned their works, the author of the "American Phonographic Dictionary," which the reader now holds in his hands, determined that he would give a practical and ocular demonstration of the manner in which, according to his judgment, the fifty thousand useful words of the English language should be phonographically written. That he has succeeded in doing so will be apparent to any one who glances through the following pages. Whether the work might have been done better by other hands, if they had ventured the attempt, it will be time enough to declare after they have labored successfully with some of the many difficulties to be overcome in such an undertaking. The writer will not boast of what he has accomplished. He appreciates, more fully than any of his readers will be able to detect, perhaps, what are the defects of his book; notwithstanding which, they being mostly of an artistic nature, and not detrimental to its useful-

ness, he presents it to the public, hoping and believing that it will be gladly welcomed as a valuable auxiliary in the study of the phonographic art.

That such a Dictionary was needed has been painfully evident to every one who has had an opportunity to observe the great diversity in the phonographic forms of words in the writing of even the most skillful phonographers. It has been with them as it was with those who wrote English before the attempt of Dr. Johnson to reduce English spelling to uniformity; almost every one has endeavored to have a style of his own, and if he could write the same words in half a dozen different ways on the same page, it was all the better, for it showed the versatility of his mind and the dexterity of his fingers. Heretofore American phonographers have had no authority to which they could turn and see at a glance how words of doubtful construction should be written, in accordance with principle, and as the result of experiment and long continued practice by those who have made a systematic study of the art. Isaac Pitman's Phonographic Dictionary, published in England, was an effort in the right direction; but the fact that generally the very words one finds it necessary to examine are not to be found in its meager pages, renders it inadequate to the wants of American shorthand writers. While the attempts of Mr. Graham and Mr. Munson to "indicate," by a necessarily obscure and complicated "nomenclature," how fifty thousand words shall be constructed from an exhaustive series of straight and curved strokes, full length and half length, and with hooks, circles, and loops at each end, are of but little more assistance than is offered by "the blind leading the blind." Sight, as to the phonographic outlines of words, is by them entirely ignored, and the pupil is compelled to "walk by faith" in solving the problem how each word should be written. Every one knows the value of the eye in enabling the memory to recall the forms of words in common print, and in reproducing them with the pen. The instructor in penmanship might as well attempt to teach the graceful and beautiful forms of the Spencerian authors by explaining

their seven principles, without the use of their copy-books, as for the student of shorthand to think of making satisfactory progress in mastering the endless combinations of phonographic forms without the assistance of the eye in enabling the mind to remember and the fingers to draw the proper forms of words.

If this effort to aid learners of the phonographic art, and to harmonize the irregularities of expert phonographers, shall be nearly as successful in affording them relief from uncertainty and inconsistency, as was the first dictionary of the English language in relieving writers and printers in its day, the author will feel abundantly rewarded for his toil and anxiety to supply a great want.

Nothing short of an exhaustive list of the words in use in all the active relations of American life—social, political, religious, scientific, professional, mercantile and manufacturing—would answer for the use of phonographic writers, because whether as reporters, amanuenses, or corresponding clerks, it is necessary that they should be ready at all times to write upon any subject brought before them. With any thing less than an unabridged phonographic vocabulary they would very often be unable to find just the words whose shorthand forms they wished to ascertain. Hence the author has included in this work not only all the ordinary English words, but has drawn largely from scientific dictionaries and special vocabularies such terms as are most frequently heard in scientific lectures, expert testimony of professional men in the courts, etc., etc., so that in these respects it is even more complete than the unabridged dictionaries.

The following may be mentioned as some of the advantages to be derived from studying, and conforming to, the style of writing herein presented:

1. It will enable the student of Phonography to make more rapid and correct progress in his study than has heretofore been possible. After gaining some familiarity with the principles of the system from his Manual, he can, by referring to the Dictionary, write every word in his exercises, or that he

desires to use otherwise, with perfect correctness. He will need to waste no time in experimenting and changing, to secure the best forms of words; nor will he suffer the chagrin of having made egregious blunders.

2. As a book to be copied through, systematically, it will be more useful than any other drill in the writing of words that has been or can be devised. The arrangement of the words in its pages, instead of being strictly alphabetic, after the order of the incongruous Romanic alphabet, is an approximation to an *etymological* arrangement; that is, the root-word is first given, and then follow the derivatives in the order of their phonographic construction, which is remarkably in harmony with their grammatical modifications. Thus, beginning with next to the last word in the alphabetical arrangement, we have:

Edify, edified, edifier, edifying, edification, edificatory; instead of the ordinary dictionary arrangement: *Edification, edificatory, edified, edifier, edify, edifying*.

We have also: *Inspire, inspired, inspirer, inspiring, inspirable, inspiration, inspiratory*; instead of the unsystematic order: *Inspirable, inspiration, inspiratory, inspire, inspired, inspirer, inspiring*.

By following this *etymological* arrangement the learner first writes the simple root form of each family of words, and then builds upon that through all its modifications; and he soon discovers the uniformity observed in writing the terminations, *-ed, -ing, -able, -ableness, -ability, -atory, -ance, -tion*, etc., and has no hesitation in applying them to any root-word. Indeed he will naturally acquire the habit of writing the various modifications of words in uniform ways, instead of learning to write each word separately.

3. Another feature of this work is, that in addition to giving the best forms for writing words out in full, it also presents in juxtaposition with their full outlines the briefest contractions for many thousands of the most frequently recurring words in the language. This will enable the learner, from the start, to be making desirable progress in the advanced style

of the art; for he will at once adopt the briefest forms of words, instead of writing the longer forms for months or years while learning, as has been the practice heretofore, and then having to break himself of the habit of so writing them and learn the contracted forms. He will thus become a proficient writer in much less time than would have been required with the old style of books.

4. And finally, the use of this Dictionary, it is hoped, will in some measure tend to bring about uniformity in the writing of phonographers generally. As it now is, for the want of a standard authority conveniently gotten up for consultation, scarcely any two reporters, though using the style of the same author, can read each other's notes; and the consequence is, each one has to transcribe his own report, or waste much valuable time in reading it to others for transcription. The mode of writing herein presented is such a systematic blending of the four leading styles in use, that the writers of each will find little difficulty in conforming to what may be properly termed the Eclectic style. And if reporters will say to their assistants and amanuenses, "We will conform to the standard of the 'American Phonographic Dictionary,'" they will have but little difficulty in reading each other's writing; there will be no waiting for "dictations;" transcripts will be got out more promptly; and the reproach that the most scientific system of writing ever devised is illegible to any but the writer, will be happily removed, as it should be.

In the preparation of this work the author brought to it the experience of a quarter of a century as phonographic teacher and verbatim reporter. During this time, in 1858, he had occasion to consider, and assist in determining, the phonetic representation of all the words in the language, while printing the phonotypic dictionary edited by Mr. Dan. S. Smalley, of Boston. This contributed in no small degree to his familiarity with the principles that govern the construction and pronunciation of words, which principles are the basis of phonographic writing. A similar experience as author of a Pronouncing Medical Lexicon, extended this famil-

ilarity into the field of classical and foreign terms, most of which are included in this volume.

The author is happy to acknowledge valuable assistance from Mr. Clark H. Louis, of Elvaston, Ill., one of the most skillful and accurate phonographic writers with whom he is acquainted. While the Dictionary was being electrotyped he wrote out on proof sheets furnished him all the words it contains, and suggested very many acceptable phonographic outlines. To his son, Mr. Leo A. Longley, one of the official stenographers of the Hamilton County Courts, he is indebted for numerous well-tested contracted forms of words, and for the careful and critical reading of the proof of the phonographic portion of the work. And to Rev. D. L. Aultman, of the Cincinnati Methodist Conference, is the credit due of drawing, from the original copy, the shorthand forms of the whole work, just as they appear in its pages.

INTRODUCTION.

PRACTICAL VALUE OF PHONOGRAPHY.

WHEN the writer began the study of Phonography, over thirty years ago, it was with the view of adopting and promoting the use of a more rational and philosophic method of representing the English language than the cumbrous and inconsistent one that has come down to us from the barbarous and illiterate ages of the past. It was then a new development, and was heralded as a most wonderful invention, adapted to the writing of all languages, and that would soon supersede the ordinary styles of writing. Reformers took it up, and advocated its use on the ground that the hoary errors of the past must be supplanted by the new and brilliant truths of the present. Periodicals were established, lecturers and teachers employed to disseminate a knowledge of phonetic science. But it was too radical a reform to make much progress on the basis of a substitution for common longhand writing, and its adoption, notwithstanding the enthusiasm of its devotees, was not as rapid as had been anticipated.

But simultaneously with Phonography came the Telegraph, which quickened the pulsations of business, and rendered time more valuable. Next came the Telephone, and then the Type-writer, each in turn calling for greater rapidity with the pen and pencil. These have been more potent agencies for bringing Phonography into general use than all the early demonstrations of its scientific accuracy and universal applicability for the writing of all languages. The requirements of rapid and extensive business transactions have been more successful in the work of reform than the most eloquent arguments of public lecturers and teachers. Thus it is that Phonography has proved a suc-

cess; and now it is sought for by the active and enterprising young men and young women every-where, not only as an accomplishment, but as the means of rendering their services more valuable, and at the same time more remunerative, in all responsible situations in life.

The fact that the inexorable demands of business have forced the overtaxed fingers of the hard workers of the world to abandon the cumbrous and tedious incongruities of the old orthography in the most important departments of industry, demonstrates the solution of the problem—How shall the English language be written and printed in the future? It has torn away the superstitious drapery that has enshrouded the languages of all nations for ages, dissipated the notion that there was sanctity in the crude and meaningless combinations of letters in the musty tomes of our fathers, and shown beyond the possibility of doubt that the young and vigorous speech of three hundred millions of the most progressive people of the earth may be, and must be, modified in its structure and dress as the demands of science, business and art require. The fact that thousands and tens of thousands of the most intelligent and progressive classes of men, not only in England and the United States, but in all habitable quarters of the globe, now employ one form of the phonetic theory of writing and spelling, forces upon the minds of all reasonable men the conclusion that the phonetic system of long-hand writing and printing will also ultimately become a success. Its advantages to the untold millions who are to learn to use written and printed English will be immensely greater than the benefits of shorthand.

PERFECTION OF PHONOGRAPHY.

It is a remarkable fact that, notwithstanding the many changes that have been made in Phonography by the inventor, Mr. Isaac Pitman, and by some of his ambitious followers, the elementary principles of the art remain essentially the same as when first published, in 1837. The al-

phabet itself, with the exception of the signs for the letters *h*, *w*, and *y*, has not been changed in the least. With reference to these letters, there is still some diversity in practice, which will be explained further along. The classification and arrangement of the simple signs, as given on page xvi, is almost universally accepted as both philosophical and practical.

As to the slight differences that exist in the minor features of Phonography, as presented by the leading authors of text-books in this country, and Isaac Pitman in England, it is proper that a fair statement should here be made. Previous to 1858, the arrangement of the dot vowels ran thus:

	ē,	ā,	äh,	ī,	ě,	ǎ,
as in	eel,	ale,	arm,	ill,	ell,	at.

This arrangement was objected to by Mr. Ellis and other scholars, as unphilosophical and practically disadvantageous, since the alphabets of all other languages begin with the letter *a*, and in nearly, if not quite all, it has the sound of *äh*. After a year's discussion, the arrangement was changed to—

äh,	ā,	ē,	ǎ,	ě,	ī.

Isaac Pitman immediately issued all his books and periodicals in accordance with this vowel scale, and has constantly adhered to it up to the present time. His brother, Benn Pitman, had then recently come to this country, and begun publishing phonographic books in the old vowel scale, and though he admitted that the new scale was theoretically right, he declined to make the change, and has not yet changed his stereotype plates to agree with the inventor's style. About the same time, Andrew J. Graham brought out his "*Hand-book of Phonography*," in the old vowel scale, and he also declined to throw his stereotype plates into the melting kettle, and make new ones at great expense. At the same time, also, the author of this work

was publishing the "*American Manual*," in the same old vowel scale, and he, too, declined to change, principally because he could not afford to do so.

It was not until the year 1866 that any author ventured to raise the banner of the new vowel scale in this country. James E. Munson, of New York, then published his "*Complete Phonographer*," using the new scale, introducing a different sign for *h*, and making other minor changes.

In 1873, Mrs. E. B. Burns issued her work on "*Phonic Shorthand*," recognizing substantially the same arrangement of the vowels. In 1879, the writer revived his active labors in the "*Writing and Spelling Reform*," and throwing his old vowel-scale Manual into the kettle he brought out his new "*Eclectic Manual of Phonography*," in harmony with the inventor and the later authors in his country, so far as this important feature is concerned. Thus, taking into consideration the large following Isaac Pitman has in the United States and the Canadas, and the co-operation he is receiving from the authors just named, it is evident that the new vowel scale is in the ascendant, and will prevail.

As to the merits of the new vowel scale, in addition to the alphabetic order of the letters, it may be said:

1. The vocalizing of the phonographic outlines of words is an essential part of the art, at least in the business style of writing, and whatever contributes to the ease and speed with which it may be done is important. The less frequently one has to go back to the beginning of words to insert vowels the better, for the further back the pen goes the greater the loss of time; therefore, the vowel sounds that occur least frequently should be given the first place to phonographic strokes, and those which occur most frequently should have the third place. And this is what the new vowel scale secures. The sounds of *āh* and *ă* are given the first place, and *ē* and *ī* the third place for this reason. Any one who will look into a printer's type-case will see that there are fully three times as many of *e* and *i* used as there are of *a*; besides which, the vowel

heard in the frequent terminations, *ly, ny, ty*, etc., is, by this arrangement, also carried to the third place. To illustrate this point, compare the following sample words, written in both the old vowel scale and the new :

Old {		meek,		leave,		repeal,		minute,
New {		meek,		leave,		repeal,		minute,

Old {		pity,		legally,		villainy,		briefly,
New {		pity,		legally,		villainy,		briefly.

It will be readily observed that by the use of the new scale the frequently recurring vowels, *e, i*, and *y*, are generally inserted at or near the end of the outline, instead of back at the beginning of the word, as with the old scale, many of them being dropped in just where the pen finishes the word.

2. Another respect in which the new scale affords an advantage over the old, is, in reducing the number of words to be written above the line of writing. It is more natural to write on the lower line of double-ruled paper, or on the single line, than it is above, and, therefore, the greater the number of words that can be consistently written on this line the better. By the transpositions of *e* and *i* to the third place, a large number of frequently recurring words containing these vowels are brought down from the first to the second and third positions.

The following are the only other points of difference worth mentioning in the several styles of writing named :

1. In the older styles (those of Benn Pitman and Graham), the curved strokes receive the *l* hook and the *r* hook in the following irregular manner :

 fl,  vl, ( thl, [ shl  zhl, upstrokes,]  ml,  nl,  fr,  vr.)  thr, [ shr  zhr, downward]  mr,  nr.

When Isaac Pitman adopted the new vowel scale he also simplified the initial hooks on the curved strokes, by

representing *r* with a small hook and *l* with a large hook, except that he retained $\backslash rr$ for $\backslash fr$, and $\backslash wr$ for $\backslash vr$, as duplicate signs for these combinations, which are not only unnecessary but sacrifice forms that are valuable for their legitimate signification.

In this reconstruction of the initial hooks, Mr. Munson and the *Electric Manual* are even more systematic than the author of *Phonography*, as will be seen on page xvi.

2. The adoption of an initial large hook for *w*, on *t*, *d*, *k*, *g*, in such words as $\backslash^v$ twice, $\backslash$ dwell, $\_$ quick, $\backslash$ quiet, $\backslash$ anguish, by Isaac Pitman and Mr. Munson, has proved advantageous to legibility, and it is now used by all progressive writers. It affords many new contracted forms and phrases for the reporter.

3. The use of the large terminal hook on the left-hand side and under side of straight strokes for the syllables *ter*, *der*, *ther*, introduced by Mr. Munson, has been adopted in this work. If it is desirable and practicable to represent these syllables on the curved strokes, by writing them double length, as is now done by all authors, why is it not desirable and practicable to represent them in a similar brief manner on the straight strokes? To do this, is to render *Phonography* more philosophical and consistent, as well as briefer, and fully as legible. Thus :

$\backslash$ father, $\backslash$ softer, $\backslash$ voter, $\backslash$ water, $\backslash$ smatter,
 $\backslash$ patter, $\backslash$ scepter, $\backslash$ gutter, $\backslash$ daughter, $\backslash$ scatter.

This confines the *shn* hook to one side of straight strokes, and very properly, for why should it alternate from one side to the other any more than the *n*-hook or the *f*-hook?

But the great advantage of the *thr*-hook is in the reporting style, where as in doubling the length of the curves, it represents the very frequent words *there* and *their*, thus :

$\backslash$ for their, $\backslash$ have their (think there, $\backslash$ on their.
 $\backslash$ up there, $\backslash$ by their, $\backslash$ at their, $\backslash$ can there.

By the use of this hook, the reporter saves one stroke out of two, besides avoiding the loss of running below the

line, which is equivalent to another stroke against the old system.

4. The only feature in which the Eclectic Style of Phonography differs from all others, is, in the use of the book-keeper's readily made $\checkmark$ for *h*. Compared with Isaac Pitman's $\int$, Benn Pitman and Graham's $\int$ and Munson's $\hookleftarrow$, for this sound, $\checkmark$ has many advantages. It is more readily made than either $\int$ or $\hookleftarrow$, the tick being made by the drop of the pen, with the least appreciable effort and loss of time, which tick counteracts the great tendency to curve both $\int$ and $\hookleftarrow$ into $\hookleftarrow$ and $\hookleftarrow$; besides which it takes all the final hooks and circles, and may be written half-length better than any of the other signs, thus: $\int$ *haze*, $\int$ *haste*, $\int$ *hasten*, $\int$ *hence*, $\int$ *enhance*, $\int$ *hat*, $\int$ *hit*, $\int$ *hot-house*. It simplifies the representation of *h*, by the use of only the one sign $\checkmark$, or its abbreviation $\int$, while in all other styles this tick is used in addition to their other and radically different signs.

5. In the Eclectic style, the old reliable $\hookleftarrow$ *y* and $\hookleftarrow$ *w*, used by every author except Isaac Pitman, are retained with increased usefulness, by hooking, writing half-length, etc., the same as all other strokes. They are far superior to Pitman's $\int$ *w* $\int$ *y*, which, of course, can not take the initial hooks, and are otherwise objectionable.

Notwithstanding the variations thus described, the author of this Dictionary believes it may be used with advantage by the writers of all styles of Phonography. The difference in the representation of two vowel sounds does not affect the consonantal outlines of words; the different use of two or three hooks will only slightly change the limited number of words in which they occur; while the use of the new *h* $\checkmark$ is so simple that it will commend itself to all and be universally adopted.

On the following page will be found a complete compendium of the style of Phonography thus presented to the public.

SCIENTIFIC SHORT-HAND,

THE ORIGINAL PITMANIC SYSTEM.

ECLECTIC SERIES

OF

Phonographic Instruction Books.

By ELIAS LONGLEY,

*For twenty-five years a Practical Verbatim Reporter, and Teacher of the
Phonographic Art.*

- I. THE ECLECTIC MANUAL OF PHONOGRAPHY.**
 - II. THE PHONOGRAPHIC READER AND WRITER.**
 - III. THE AMERICAN REPORTER'S GUIDE.**
 - IV. THE AMERICAN PHONOGRAPHIC DICTIONARY.**
 - V. CHART OF THE PHONOGRAPHIC ALPHABET.**
-

INTRODUCTORY REMARKS.

The wonderful popularity and practical success of the system of short-hand writing devised by ISAAC PITMAN, of England, is unparalleled by any invention in the civilized world. The happy discoverer of the philosophic classification of the sounds heard in English speech, and of the briefest and most scientific method of representing those sounds, is still alive, an active, energetic author and publisher of his own books. Without any of the humbuggery or hot-house stimulating processes so generally used to force a commodity upon the market, his instruction books have sold to enormous numbers, and his system of phonographic writing is studied and used in every land where the English language is spoken, not excepting the barbarous regions of India and the hitherto exclusive empires of China and Japan. 'Writing by sound' has preceded, and exceeded vastly in extent, the rapid progress of railroad travel and telegraphic communication, until now not only every city, but almost every village in Great Britain and her provinces, and in the United

States and its Territories, this "bewitching art" and "time-saving" system of recording thought is practiced to a greater or less extent.

As might have been expected, from all past experience, whenever and wherever a man of genius, or of good fortune, succeeds in a worthy undertaking, there will be eager and unscrupulous imitators who will seek to enjoy fame and fortune by launching their ill-begotten travesties upon the waves of other people's well-merited success. Hence, during the past few years, while Phonography has been working its way into practical and profitable use, not only in the professions but into the clerical departments of all large manufacturing and commercial establishments, the public mind has been beset, and earnest inquiry confounded, with the pretentious and absurdly impossible merits of new systems of short-hand. In nearly every instance the authors hesitate not to "steal the livery of heaven in which to serve the devil," and call their abortions "phonography," or some other "graphy," well knowing that by any other name their bantlings would not meet with any favor. With scarcely an exception they are destitute of the first principles of phonetic science, and utterly disregard the simplest rules of vocal representation. One of these many rivals of pure Phonography ignores both the name and theory of the phonographic art. Anchoring his enterprise to the absurdities of an orthography that, like Topsy, "was n't raised at all, but just grewed up," the author denounces the phonetic idea, and turns his back upon progress and improvement, at the time when, from all the universities, colleges, and other representatives of knowledge and literary judgment, the demand for an enlarged alphabet and reformed orthography is being pressed upon public attention. Adherence to acknowledged error, even with a host of laudatory followers, can not long flourish in the sunlight of science.

The Eclectic Series of Phonographic Instruction Books herewith announced are substantially in harmony with the perfected system of the original inventor. They embrace important improvements adopted by him several years ago, but which have not yet been incorporated into other instruction books in this country, for the reason, undoubtedly, that it would involve a large expenditure of money to prepare new stereotype plates of all their books. They also present a number of features that

have been developed by the best American writers of Phonography, in the effort to keep pace with the lightning speed of Yankee eloquence. These have been carefully incorporated with the English style of writing, so as to render the whole harmonious as well as comprehensive. English phonographic writers will therefore find the Eclectic Series of great value to them in abbreviating their lengthy outlines of words and thereby increasing their speed. In this respect these books are cosmopolitan in character and should be welcomed as heartily by Englishmen as by Americans.

I.

The Eclectic Manual of Phonography. A Complete Guide to the acquisition of Pitman's Phonetic Short-hand, with or without a teacher. 12mo, 144 pages, cloth, 75 cts.

The author of this series of books began his experience as a phonographic writer and publisher in the year 1848, very soon after the introduction of the art into this country. He has examined every thing that has been published on the subject from that time until the present. His "American Manual of Phonography," first published in 1854, continued for twenty-five years to be one of the most popular short-hand books in the market.

The Eclectic Manual now presented to the public is an entirely new work, but embodies the characteristic features of the former book, simplicity in style, classification, and sequence of illustrations and exercises. The first lessons are rendered more easy of comprehension by the introduction of portions only of the alphabet at a time, out of which simple exercises are readily formed; and by interlined translations of the short-hand in common print, both of which are features to be found in this book alone.

The exceeding brevity of the English instruction books has been avoided, while the great prolixity of most American authors, whose large and crowded pages, reaching into the hundreds, has been as judiciously guarded against. In this book of convenient size the time and memory of the pupil are not taxed with unnecessary and impracticable discussions of philosophical points in relation to language and its visual representation. He is not deterred from beginning the study by a formidable volume, nor discouraged by the slow progress of memorizing page after page of abstract principles and rules before becoming charmed with the practice based upon them. In its inviting pages principle and practice go hand in hand.

An important feature in the Eclectic Manual is such an arrangement

of the lessons that no word or class of words is required to be written until the principle is explained by which they are written in their most approved forms. By this means the student is not compelled to spend his time in learning to write long lists of words, and then suffer the discouragement of having to drop and forget the forms thus learned and familiarize himself with new and better ones. What is once learned in this book remains a fixed fact with the pupil in all his after use of the system.

II.

The Phonographic Reader and Writer. Containing Reading Exercises, with translations on opposite pages, which form Writing Exercises. 12mo, 48 pages, 25 cts.

This little book should be in the pocket of every phonographic student until he can read and write every line without hesitation. It is the best substitute he can have for the constant presence of an attentive teacher. Though he may have studied the lessons thoroughly, he will find it slow work reading Phonography until he has learned to recognize words by their form. To attain this skill it is necessary to read a great deal; and to do this one should not spend much time in analyzing the structure of words, or guessing at them as a whole. In the absence of a teacher to tell him, he needs an ever-present guide to save him from unnecessary waste of time. This prompt and faithful guide he will find in this little book, in the convenient key to every word, on the same or opposite page.

III.

Phonographic Chart. Containing the Perfected Alphabets of the English Language, Phonotypic and Phonographic, on one large, beautifully printed sheet, to be used in teaching the elementary sounds, in connection with the Phonic method of teaching reading and in elementary drill; also, in teaching the elements of Phonetic Short-hand. Size, 28 by 42 inches. 50 cents, postpaid by mail.

IV.

The American Reporter's Guide. Containing the most complete list of phrases ever published; also, Exhaustive Lists of all Contracted words used in Reporting; supplemented with ample exercises in the briefest style of writing, with a key to the same in common print on the opposite pages.

[In preparation, and will be published in November.]

The author's long experience of twenty-five years in practical re-

porting, both on newspaper work and as an official court reporter, and his critical study of all other works on the subject, enable him to bring to the compilation of a new book on this most difficult art, unequalled qualifications for accomplishing well this task. Having within the past year retired from the active pursuit of his reportorial profession, he is devoting the best efforts of his ripe years to the production of a volume that will not only be a credit to his reputation as a phonographer, but a most reliable and helpful guide to the thousands of young reporters whose accurate and skillful services will be required in the immediate future.

V.

The American Phonographic Dictionary of the English Language. Giving the short-hand forms, not only of all ordinary English words, but also of many scientific and other terms not found in common dictionaries; also, the short-hand forms of several thousand Geographical and Personal Names. Large 12mo, about 400 pages, cloth.

This crowning work of the series, upon whose pages the author has spent three years of study and labor in the compilation and phonographic preparation of the same, is now rapidly approaching completion, and will be in the market early in September. Of phonographic dictionaries *without a phonographic word upon any one of their enigmatical pages*, practical and hasty American students of short-hand have had enough. Like the victim of two evils, they have long been turning from one to avoid the other, only to wish in the end that they had never seen either. The English Phonographic Dictionary was an effort in the right direction; but the fact that generally the very words one looks for are not to be found, renders it almost useless in this country. The attempt to "indicate" by a necessarily obscure and complicated "nomenclature," how fifty thousand words shall be constructed out of a series of straight and curved strokes, full-length and half-length, and with hooks, circles, and loops at each end, is about equal to giving the student the ten Arabic figures and asking him to write the weights of the several planets, their distances from each other, and their duration in the eternity of ages. The phonographic pupil wants to study short-hand, and not the solving of complicated problems in algebra in a phonographic dictionary. Therefore this dictionary presents, in connection with the words in common print, *the best short-hand forms for the same*, which, by cultivating the eye in this manner, will aid the mind to remember and the fingers to draw the proper outlines.

The arrangement of the words in this dictionary, instead of being strictly alphabetic, after the order of the incongruous Romanic alphabet, is an approximation to what might be called an etymological arrangement; that is, the root of the word is first given, and then follow the derivatives, in the order of their phonographic construction, thus: Inspire, inspired, inspirer, inspiring, inspirable, inspiration, inspiratory; instead of Inspirable, inspiration, inspiratory, inspire, inspired, inspirer, inspiring.

This will render the book convenient and useful, not only for reference as to the forms of words, but also as an exercise book from which to copy. The learner will much more readily fall into the correct method of writing words by observing and building up the various modifications and terminations of words in a uniform way.

Another feature of this work is, that, in addition to giving the best forms for writing words in full, it also presents to the advanced student, in juxtaposition with their full outlines, the briefest contractions for many thousands of the most frequently recurring words in the language.

The lists of Geographical and Personal names contained in this dictionary are the first that have ever been published in phonography. They are no less important for the reporter and short-hand clerk, to learn to write briefly and legibly, than the same number of ordinary words; and the aid thus afforded writers of all styles of the art will be duly appreciated.

VALUE OF THE DICTIONARY.

"The specimen pages of your forthcoming Phonographic Dictionary have been received, and examined with pleasure. The pleasure was increased by reason of the fact that I am saved the task which I had laid upon myself of urging you to bring out some book for general readers that would train them in reading and writing the best phonographic forms of words. The work which you have in hand will prove of far more value than any thing that I might have suggested. I hope that you may reap a double reward for this great work—a fair pecuniary reward, and the greater reward of seeing the cause to which you have given the best years of a well-spent life flourish beyond all precedent. I shall look earnestly for the new book, but I hope you will not permit me, or any one else, to hasten its appearance by a single day, at the expense of first-class work. PROF. CHARLES S. ROYCE,
"Collegeville, Pa."

"I have examined a number of specimen pages of your Phonographic Dictionary, and think that it will be a valuable addition to phonographic literature. The important feature of the work will be the giving of engraved outlines for words. The use of a Phonographic Dictionary universally among reporters would ultimately establish a

much needed uniformity of phonographic outlines, in the same way as the universal acceptance of Webster's as a standard dictionary fixes a uniform English orthography. This uniformity of phonographic writing would be a vast saving of time and labor, for it would increase legibility and the ability of stenographers to read each other's writing, whereas, now, as a general thing, the writing of one is almost as legible to another as Greek is to the uneducated.

"HELEN T. PIERSON,

"Official Stenographer of Hamilton County Court, Cincinnati, O."

OPINIONS OF PHONOGRAPHIC TEACHERS.

"Your little book seems to me to be the very best for learners that has yet been issued. It is a clear, honest exposition of what PHONOGRAPHY is and can do. The matter of the book is excellent, in its simplicity of arrangement, fullness of suggestion, methodical and practical presentation of the principles of the art, and in its helpfulness to the unpracticed student. The typographical execution is faultless, and reflects credit on the author's knowledge 'how to do it' in the printer's art.

"Permit me also to familiarly say that the whole tone and tendency of the book is pure and helpful, and shows a careful scissors, or a very wise, honest head and heart in the composition of matter for the reading and writing exercises.

"It gives me pleasure to write these words of commendation on a piece of work that merits more praise from a more discerning judgment, and which I have no doubt is already widely appreciated.

"D. A. BROWN,

"Teacher of Phonography in the Spencerian Business College, Washington, D. C."

"I take pleasure in saying that I have used your 'Eclectic Manual' in my phonographic classes for some time past, and consider it the best instruction book on short-hand published. I formerly used Isaac Pitman's books, but consider your Eclectic Manual far superior, either for classes or for private students. I shall continue to use the Eclectic Manual in the Central Normal College.

S. H. EAST,

"Teacher of Phonography in the Central Normal College, at Danville, Ind."

"I am pleased with your admirable system of Phonography, and would introduce it into my classes only for one thing, and that is my reluctance to use any other system than Father Isaac's, because there are more books, periodicals, etc., printed in that system. I believe your *h* is in many cases more easily joined, and is in other respects, perhaps, superior to Isaac Pitman's. Your Ter-hook gives very brief outlines for many words, and I think it will ultimately be adopted by many writers of the Pitman Phonography.

WM. JAMES MAHON,

"Teacher of Phonography, Ballantrae, Ontario."

"I shall use your books exclusively for my private classes, and as soon as possible use them also for my public classes.

DR. L. B. CLIFTON,
"Traveling Teacher."

OPINIONS OF RIVAL AUTHORS, ETC.

"I am very much pleased with the appearance of your Manual. It is the first time I have seen it, although Graham's, Munson's, Scovill's, and Cross's are familiar to me; and for the students who succeeded in wading through and remembering such a ponderous mass of matter, I have always had the greatest admiration as well as pity. But since seeing your method I can understand how the system may be learned without spending half a life-time at it. The typographical appearance of both your Reader and Manual is very superior; in fact, the very best I have seen.

H. M. PERNIN,
"Author of *Instructor in Duployé's French Short-hand.*"

"I have your Manual, and like the system better than Isaac Pitman's.

A. ELLSWORTH THOMAS,
"Altoona, Pa."

"I can not express to you my delight at having taken up your system instead of one of the many others in the market. The more I see of it, and study it, the more I like it.

J. MIDDLETON,
"Washington, D. C."

"I like your works very much, and as you will see do not find any difficulty in writing according to your system—that is, when I write slowly. I shall take special pleasure in advancing your interest with the school board here.

E. H. HEMPERLY,
"Philadelphia, Pa."

"I like your system very much, and would recommend all beginners to take your work.

CHARLES W. BELL,
"Oakland, Cal."

OPINIONS OF SELF-INSTRUCTORS.

"All the Manuals of Phonography I have ever seen say that they are prepared for those who have not the assistance of a teacher. I think your Eclectic Manual is undoubtedly the best for self-instruction that I have ever seen.

E. H. CUTTS,
"Americus, Ga."

"I first started to learn Phonography in the Benn Pitman System; changed to the Eclectic, and have never regretted doing so.

DWIGHT FURNESS,
"Furnessville, Ind."

"I have been a student of various systems of Phonography for several years past. I began with Munson's in the year 1876. After studying his system for three or four weeks I became terribly discouraged, and was about to give up in despair, when I made the acquaintance of Mr. Stoll, who recommended that I should take up Isaac Pitman's system, which I did, and have ever since been one of his followers. Within the past year I heard so much of Mr. Graham's System that I became dissatisfied with Pitman's. I procured Mr. Graham's Hand-book and began its study, but soon became disgusted with his vowel scale, etc., so it was laid aside. My last experience was with the 'Eclectic.' Received the Manual a few days ago and have completed it. Of all the systems that I have examined, the 'Eclectic' is the system of my choice. I. N. McALLISTER,

"St. Paris, O."

"Twenty years ago I studied your Manual of Phonography. Then I fell into the 'Standard' current, and have used Graham's System ever since. But, though writing Phonography every day, I never have become able to use it with entire confidence, on account of the number of word-signs and contractions. Many of them are of so rare occurrence in actual use that one can never, I think, make them familiar unless he continues all his life to study and practice them as distinct exercises. And now, at the age of thirty-one years, I have made up my mind to abandon Graham and master another system. But, what system? Alas! I can not tell. I have determined to investigate before deciding. MILAM C. AYRES,

"Pastor Congregational Church, Southington, Conn."

"I have carefully examined your Eclectic Manual of Phonography, and find myself so stirred up by its perusal that I have resolved to prepare myself for verbatim reporting. In doing so I want to use your text books, and regard myself as your pupil. C. CARUTHERS,

"Akita, Japan."

"I have been studying your system of Phonography three months, and this is the style of writing acquired thereby. I can write as high as 60 to 70 words per minute from familiar matter, and can assure you that I have never taken up any study in which I have been more interested than in this study of Phonography. [The writing was beautifully accurate and legible as print.] E. M. HUTSINGER,

"Providence, R. I."

VIEWES OF WELL-POSTED EDITORS.

[From the Daily Advertiser, of London, Canada, whose Editor is an Accomplished Phonographer.]

"This interesting work proves to be all that the advanced sheets promised—one of the most useful works on short-hand before the public. It is really the best exposition of Pitman's Phonography that we

have seen, combining the best features of the original system with the most practical improvements recently invented. It contains all the information that is required by a learner of the art, which is far more than can be said of Pitman's Manuals, while it is not overloaded with prefaces, etc., like some of the other text-books."

[*From the Meadville, Pennsylvania, Journal.*]

"The object in giving this Manual to the public is to restore harmony and unity among American phonographers. In its pages he presents all the new features that have stood the test for many years of both experiment and practical experience. Thus the student who acquires his knowledge of Phonography through this Manual will become familiar with the distinctive features of other authors, and be able to read the writing of phonographers of any school. The author has most happily succeeded in his object; principle and practice go hand in hand, and all unnecessary and impracticable discussion has been avoided. For simplicity and practicability the ECLECTIC MANUAL is far superior to any work on Phonography that has come under our observation."

[*From the Christian Union, Henry Ward Beecher's Paper, New York, N. Y.*]

"In the present volume, Mr. Longley has successfully compressed the entire system, from the alphabet to reporting phraseography, into twelve lessons—each furnishing material for a week's diligent study—easily graduated, so as to encourage the learner, and with the stenographic examples legibly, not to say beautifully, engraved. It will do much towards establishing uniformity of style, and is, in fact, an application of the Ollendorff system of tuition to short-hand writing."

[*From the Vidette, Valparaiso, Ind.*]

"We are indebted to Elias Longley, Cincinnati, one of the most reputable short-hand authors, for a copy of his new ECLECTIC MANUAL OF PHONOGRAPHY, which we consider an improvement upon all works of the kind in use, and just as near perfection of the art as will for many years, if ever, be attained. It is, we think, the smallest, cheapest, simplest, easiest, and on the whole decidedly the best book for a learner of short-hand reporting, either with a teacher or without. It is the proper text-book on this branch for high schools and academies."

[*From the Daily Inter-Ocean, of Chicago, Illinois.*]

"If any of our readers desire to study Phonography, they could not supply themselves with a better book than this. It is complete, precise, and eminently practical, and can be studied during leisure at home as well as with a teacher."

[*From the Cosmopolitan Short-Hand Writer, Toronto, Canada.*]

"The modifications are quite few, but some of them very important, both in simplifying the system and enabling the reporter to keep up with the speaker with greater ease."

ADVICE TO EDUCATORS.

"If you would give instruction in a branch that offers the very highest inducements to honest, intelligent effort, and if you have within your reach a teacher qualified, first by nature, education, and experience, and second by a thorough preparation in his specialty, include Phonography in your list of studies, and you have that which will bring honor to your institution and money to your pocket."—*C. E. Cady, Principal of a New York Commercial College, himself a Phonographer, to the Convention of Business Educators, in session at Cincinnati, June 8, 1882.*

"I regard Phonography as one of the most important sciences existing, not only in value for learning to write as fast as speech, but as a drill to the mind, equaling, if not surpassing, the classics. In Phonography there is something tangible and reasonable all the time—no uncertain mythology to cloud the intellect."—*Professor Jasper Star.*

Dr. John Hancock, late President of the National Educational Association, in an address to the Convention of Business Educators, said: "Phonography is one of the things that should be taught in your Business Colleges. The time is coming when it will supersede the cumbersome longhand. [Robt. C. Spencer, of the Spencerian Penmanship family, interrupted with the words, "Let it come—the sooner the better."] Why spend so much time in learning longhand penmanship when the shorthand may be as readily learned, and written three times as fast?"

PRACTICAL VALUE OF PHONOGRAPHY.

Hon. Leonard Swett, of Chicago, in a recent address, said: "A boy applies to me for a place. He is bright, sharp, smart, and fresh from school. I ask, what can you do? He replies, I can read Homer, Hesiod, the Greek tragedies, scan Virgil, am well up in mythology, chemistry, botany, and geology.

"I say, could you keep the books of my office?

"No, he says: I thought it better to stick strictly to my college course, and common things, like book-keeping, I could learn afterward.

"I say, can you take letters in shorthand, from my dictation, and then print them on the type-writer?

"He says he never thought of learning shorthand or type-writing, and I am compelled to tell him he can not help us."

"I know more than one minister who is able to write a sermon about as quickly as a sermon is delivered, and he is then able to read

it just as easily as from equally good longhand. And then what a power, to be able to catch and record as it flies, some learned and valuable lecture, some eloquent speech, some impressive sermon! And who has not lost many a striking train of thought; many a clear, comprehensive view; many a brilliant image, which this magic art might have forever daguerreotyped! Then comes to the young man or young woman, as a natural consequence, a most ennobling, intellectual habit. The very practice of recording and journalizing selected thought, creates the habit of cherishing, valuing, selecting, and cultivating thought."—*Rev. D. D. Wheedon, D. D., Editor of the Methodist Quarterly.*

"There is nothing of mysticism, nothing of difficulty, nothing incomprehensible in the study or practice of shorthand writing that other studies do not present. No subject presents greater inherent charm, none more fascinating, none more easily learnt, and none approaches it in its promise to the young learner of present gain and future usefulness."—*Address of E. C. Cady, of New York Commercial College, at Business Educators' Convention in Cincinnati.*

"We may be thought extravagant, but we are conscious of speaking the truth, when we say, that we would not give up the use of Phonography for the addition of \$500 per annum to our income."—*Editor Christian Philanthropist.*

"Professor Agassiz told me yesterday that Phonography had enabled him to do more in one year than he could have done in three years without it."—*Edwin Leigh, Boston.*

**ROBERT CLARKE & CO., Publishers,
61, 63, 65 W. Fourth St., CINCINNATI, O.**
